Sholom Y. Gross, Executive Director
International Kashrus Association
Box 163, Dyker Heights Station
Brooklyn, New York 11228

Dear Mr. Gross:

Poultry injected in Colorado are injected in the neck close to the head.

I have no knowledge of the percent of chicks vaccinated in the United States, however as a general rule broilers or fryers are not usually vaccinated. Laying hens are usually vaccinated in Colorado routinely at the hatchery.

Your third question is not applicable to this office as we have no vaccine.

Very truly yours,

Joe C. Bowman, Chief
Poultry and Egg Section
