

December 31, 1975

~~is~~ is in answer to your correspondence dated December 24, 1975, in which you requested information with respect to certain types of raw materials contained in Revlon's lipsticks.

Our lipsticks contain highly purified lanolin and some of its derivatives, which are also highly purified materials.

The alcohol used in our perfume products is a synthetically derived product.

Hoping this has been of help in answering your questions, I remain,

Sincerely yours,

REVLON RESEARCH CENTER, INC.
